

DR. CHRISTOPHER CONDON

THE MOST ADVANCED APPROACH TO NON-SURGICAL SPINAL DECOMPRESSION

SpineMED combines patented pelvic positioning, direct pelvic capture and rapid computer-controlled force adjustments to precisely target lumbar or cervical spinal segments. Its nuanced, segment-specific application is engineered to achieve effective decompression using substantially lower distractive forces than older traction-style systems. Manufacturer materials describe protocols that can use only a fraction of the force associated with older devices—depending on the patient and protocol—while the system is designed to maximize focused decompression at the intended spinal segment. This lower-force approach is intended to improve comfort, control and treatment tolerance.

ARIZONA'S ONLY CERTIFIED
SPINEMED PROVIDER

What makes SpineMED different?

1

TARGETED TREATMENT

Patented pelvic tilt and positioning features help focus distraction on specific lumbar segments; the cervical unit is designed to target neck segments.

2

DIRECT, SECURE POSITIONING

Patented pelvic restraints capture the pelvis without traditional nylon harnesses, supporting consistent setup and efficient force delivery.

3

COMPUTER-CONTROLLED PRECISION

The system continuously monitors treatment forces and makes rapid adjustments designed to reduce unwanted muscle guarding during decompression.

4

LOWER-FORCE COMFORT

Precise positioning and direct pelvic capture allow treatment protocols to use relatively low distraction forces, which improves comfort and tolerance.

5

PATIENT-CENTERED SAFETY

A patient safety switch keeps the patient in control, while adjustable bolsters, lumbar support and comfort features help create a relaxed session.

Monica M.

“Love love love these people. It’s not just about your spine, it’s about your total health and wellbeing. I’ve been visiting Ally Spine and Dr Chris for 2 1/2 years and it’s been life changing. The entire team is fantastic. The non surgical spinal decompression has helped me tremendously. It’s worth the investment and consideration before any spinal surgery in my opinion. Dr Chris will take an X-ray and guide you on the best course of action for your individual condition.”

Could Spinal Decompression be right for you?

- Bulging or herniated discs
- Disc degeneration
- Sciatica / radiating pain
- Chronic neck or back pain
- Spinal stenosis (when appropriate)
- Arthritic / degenerative spinal pain

A personalized evaluation matters!

Spinal decompression is not appropriate for every condition. At Ally Spine Center, your history, examination and available imaging can be reviewed to determine whether this approach fits your needs and goals.
